

Academic Research Using Burgiss Data

The Private Equity Research Consortium (PERC) and Burgiss are pleased to have a relationship that allows Burgiss data to be used in academic research.

All research projects should seek to create publishable public domain research, typically done by full-time faculty members or doctoral students with the endorsement of faculty. PERC does not provide access for masters theses or support work that is for commercial purposes.

In some cases, PERC provides a “discovery period” for non-standard projects that might require additional information to determine the feasibility of the project. In these cases, the PERC Advisory Board will work with Burgiss staff to investigate whether a proposed project is viable and report to the applicant within 60 days of the original decision deadline. Some projects may be immediately actionable, in other cases a project may be feasible at a projected future date or infeasible.

Due to the confidential nature of the data, researchers will be required to sign a non-disclosure agreement. Moreover, analysis of the data will occur in a secure environment supported by staff paid for by the Consortium. Generally, the statistical analysis will be done by dedicated staff on site at the Burgiss offices. The researcher will supply code and receive research results that are derived from the Burgiss data.

Applicants seeking to use the data for academic research should submit the following to PERC whose advisory board evaluates proposals:

- **A research proposal providing:**
 - a detailed explanation of the research question,
 - how and why data from Burgiss are necessary for the research,
 - an explanation of the empirical methods and any other data sources that are required for undertaking the analysis,
 - the targeted outlet for publication (e.g., journal, book, etc.),
 - a time-line for project completion, and
 - acknowledgment of ability to use STATA.
- **Acknowledgments of:**
 - willingness to sign a non-disclosure agreement (NDA) with Burgiss. Work can begin only after an NDA is signed.
 - agreement to present the research results at the PERC annual conference if invited to do so.
 - Agreement to (in circulated versions of your research) thank the Private Equity Research Consortium (PERC) and the Institute for Private Capital (IPC) for support.
- **Curriculum Vitae of all researchers.** In the case of doctoral candidates, a letter of recommendation from a dissertation advisor (who will also be required to sign an NDA) is required.

All items noted above should be combined into a single pdf file and submitted via email to research@burgiss.com . You should receive an email confirmation within a few business days of your submission.

In order to plan resources to support research, PERC approval of a project will initially be for a two year period that starts once the researcher contacts Burgiss and initiates the process for data access. Investigators on approved projects will be asked to provide a short one-year progress report to the Advisory Board. Projects will be extended beyond the initial two-year horizon when progress is being made and in recognition of timelines for journal submission and reviews.

Project proposals requiring the mapping of records between the Burgiss Manager Universe and another database must include requirements (e.g. number of records to be mapped) and detailed information about planned mapping methods.

Researchers agree to submit the paper and/or presentation slides for Burgiss review before sharing with third parties (e.g. conference presentations, journal submissions). The sole purpose of Burgiss' review shall be to ensure that no confidential information is disclosed. Researchers will not analyze the Burgiss data or combine the Burgiss Data or research results with any other data in a manner that would enable the identification of any specific partners, partnerships or investments. Researchers will make reasonable changes requested by Burgiss to protect confidentiality of the Burgiss Data.

Application Checklist:

- i. Cover letter with contact information and acknowledgement of
 - a. willingness to sign NDA,
 - b. willingness to present research at annual conference,
 - c. status as full-time faculty or Ph.D. student, and
 - d. agreement to thank PERC and IPC.
- ii. Research proposal.
- iii. *Curriculum Vitae* of all researchers (and advisor's recommendation letter for Ph.D. students).

Description of Burgiss data available to PERC

The Burgiss data available for use by PERC researchers is comprised of the net-of-fees contributions, distributions, and valuations for more than 9,000 private capital funds. No names are disclosed in the dataset.

The following attributes are also included in the dataset:

- Vehicle Type - To denote whether it is a fund or fund of funds
- Vintage - Year of the first cash flow, ranges from 1979 to present

- Asset Class Tier 1, 2, 3 - Strategy description
- Geography (Funds only) - Region where more than 50% of capital has been invested
- Market Focus (Funds of Funds only) - To denote whether it invests in primaries or secondaries
- Currency - Reporting currency
- Fund Size – Total committed capital

Asset Class Categories
